

VIT D3 RESTORE FACTSHEET

VIT D3 Restore was developed in response to the phenomenal amount of research that has gone into vitamin D3 over the past few years.

After reviewing the literature, critiquing the science and being inspired by the outcomes, we knew we needed to get this ingredient into the hands of those who could benefit most. Brought to market for our impact partners to distribute to vulnerable and at-risk members of our community, VIT D3 Restore is also available to the public and – like all Give Back Health products – we like to set the bar high when it comes to quality and efficacy.

VIT D3 Restore delivers a generous 500 doses of low allergen, premium quality, practitioner grade vitamin D3 in every single drop. The only excipients are non-GMO and sustainably sourced medium chain triglycerides (from coconut), sunflower oil and vitamin E.

The elegant German engineered dropper bottle makes it the perfect package to help restore vitamin D3, stimulate a healthy immune system response and prevent dietary vitamin D deficiency. In addition to the positive effects on the immune system, vitamin D3 also helps with muscle function, nervous system health, calcium absorption and healthy teeth and bones.

PRODUCT INFORMATION

AUST L: 389223

Pack size: 15mL

Storage: Store below 25°C in a cool, dry place away from direct sunlight.

Directions: Mix one drop daily with 100 ml of water and consume immediately, or as recommended by your healthcare professional. Invert bottle to dispense individual drops.

UNIQUE QUALITIES

- Helps stimulate a healthy immune system response.
- Provides a balanced immune response.
- One of the most researched vitamins of this century.

WHO IS IT GOOD FOR?

- Suitable for children, adolescents, adults and the elderly.
- Suitable during pregnancy and lactation.

Vitamin D deficiency is recognised as a worldwide public health problem.

WHEN SHOULD IT BE USED?

- Daily to maintain optimum vitamin D levels.

The latest credible literature recommends 400 IU – 1000 IU daily for the best immune protective benefits.

WHY IT WORKS

- Vitamin D helps tailor a targeted response to immune system challenges by stimulating specific immune cells.
- Provides vitamin D, which is commonly low in Australia.
- Stimulates immune cells that clear up and remove debris and dead cells so you can recover faster.
- Low vitamin D status shown to be a risk factor for immune dysfunction.
- Vitamin D provides a protective effect and helps reduce the incidence of immune dysfunction.
